Presented by BlueScope

Pusat Rehabilitasi PERKESO Sultan Nazrin Shah

Ipoh, Perak, Malaysia

Spanning at 38.47 acres, this advanced Neuro-Robotic and Cybernic facility stands as Southeast Asia's largest specialized rehabilitation campus, purposefully designed to prioritize both physical and psychological recovery. The masterplan emerges from a distinct triad of landscape identity, cultural heritage, and parametric technology.

Clean COLORBOND® XRW Steel's standing seam system enabled the seamless execution of the roof's complex organic geometry and distinct profile, delivering a weather-tight, self-cleaning finish without compromising design intent.

Mega canopy(Total roof area = 34,469m²) is designed to equally distribute rainwater runoff equally along its perimeter eliminating localized stress points and prolongs roof envelope durability
